AI-POWERED MEDIA FORENSICS

PRISM: Media Authenticity Analyzer

Check if a photo, video or audio clip is real, AI-generated or manipulated, and understand why in plain words.

[Your name] · [College or event] · October 2026

THE PROBLEM

Seeing is no longer believing

47%

of Indian adults have faced an AI voice-clone or deepfake scam, or know someone who has. The global average is 25%.

83%

of Indian victims of AI voice scams lost money. Almost half lost more than Rs 50,000.

550%

rise in deepfake cases in India since 2019, reported in a legal study.

Most people cannot tell a real clip from an AI fake by eye or ear. They need a simple, trusted check.

WHAT IT IS

A forensic lab that speaks plain language

The Media Authenticity Analyzer checks images, videos and audio with several AI methods at once. It then explains the result in simple words, so anyone can understand it.

A clear verdict
Real, AI-generated or manipulated.

A manipulation score
One number from 0 to 100.

Proof in simple words
What was found and how sure we are.

HOW IT WORKS

Four simple steps

1

Upload

Add a photo, video or audio file, or check it from the browser extension.

2

Analyze

Several AI models look for signs of editing or AI creation.

3

Score

All the signals are combined into one manipulation score.

4

Explain

A short summary says what was found and how sure we are.

Every result also shows how confident the system is, so users know when to double-check.

THREE KINDS OF MEDIA

One home for images, videos and audio

Image

Was this photo edited?

Looks for edited areas, AI-made faces and hidden file clues.

Video

Is this face swapped?

Checks faces, lip movement and glitches from one frame to the next.

Audio

Is this voice a clone?

Listens for cloned voices and sounds that were stitched in.

THE MANIPULATION SCORE

One number, three simple zones

Likely real

No strong signs of editing or AI creation were found.

Not sure

Some warning signs. Check the source before you share.

Likely fake or edited

Strong signs of AI creation or editing. The report shows the evidence.

Zones are our proposed design. The score guides people; it is not a court verdict.

INSIDE THE ENGINE

Many signals, one clear answer

Image classifier
Spots tiny patterns left by AI image makers.

Face and lip check
Tests if faces, blinks and mouth moves look natural.

Noise patterns
Finds textures that real cameras do not make.

File clues
Reads hidden file details and traces the source.

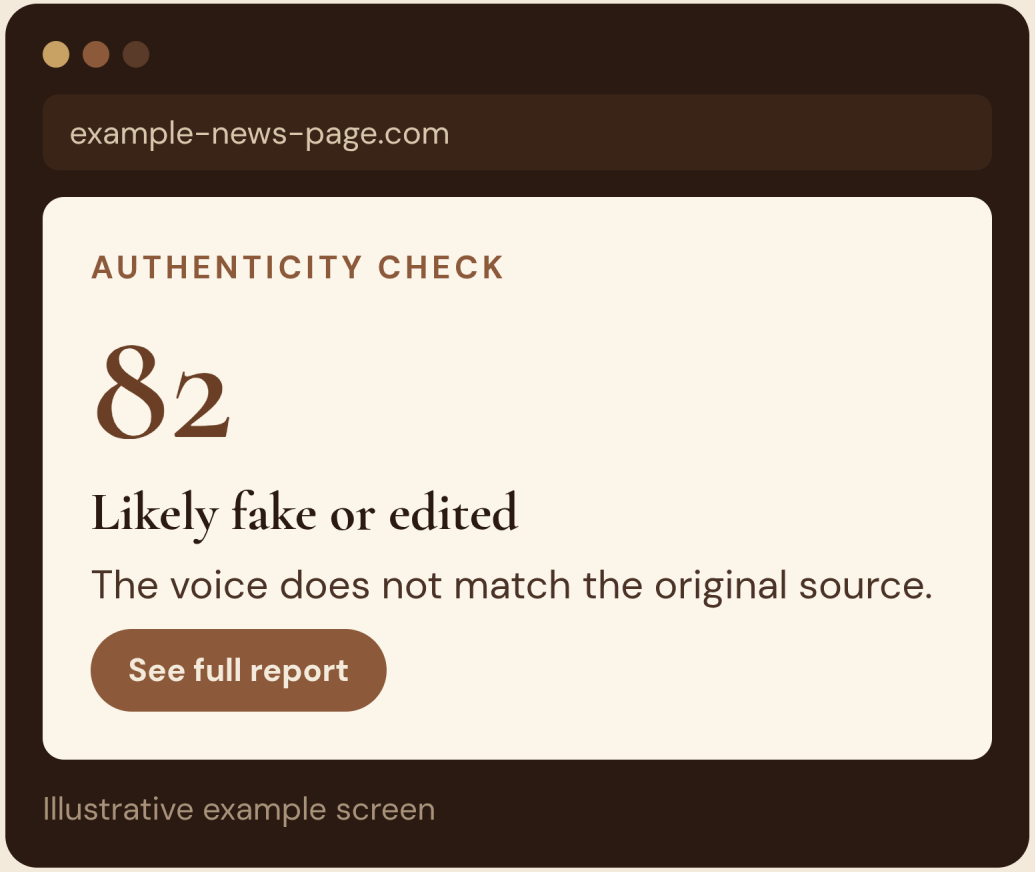

Voice analysis
Listens for cloned or stitched-together voices.

GenAI explainer
Turns findings into plain words, with confidence.

BROWSER EXTENSION

Check media while you browse

- Right-click any image, video or audio on a web page and choose Check.
- A small score badge appears without leaving the page.
- Source tracking shows where the media appeared before and who posted it first.

Illustrative example screen

THE WEBSITE

Professional, warm and easy for everyone

Your profile
Create an account to keep all your checks in one place.

Safe login
Log in and log out securely, any time.

Evidence vault
Old results and files stay private and protected, ready when you need proof.

Three clear sections
Image, Video and Audio each have their own page with easy steps.

Warm shades of brown, large buttons and everyday words, so no technical knowledge is needed.

SYSTEM DESIGN (PROPOSED)

Three layers, working together

LAYER 1
Front end

- Website
- Browser extension

LAYER 2
Back end

- Secure upload
- Image model
- Video model
- Audio model
- Score engine
- GenAI explainer

LAYER 3
Storage

- User accounts
- Evidence vault
- Saved reports
